

Magnetically coupled pneumatic cylinder P1Z ...

No leakage, with high magnetic coupling force

The P1Z is a rodless pneumatic cylinder with piston and carriage equipped with ring magnets.

Motion is transmitted via the magnetic force locking between the piston and the carriage.

The guided version consists of a carriage fitted with 4 plain bearings, guided on 2 guide rods the design provides high rigidity, accurate guidance and a non rotating movement.

- Double acting with guide
- Magnetically coupled without mechanical connection
- Mechanical protection in case of occasional overload due to magnetic uncoupling
- Piston chamber and Slide are pressure tight
- Pressure tight and leak free system
- With adjustable pneumatic end cushioning on both sides
- Carriage is free to rotate 360° around the cylinder axis
- Air connection at one end (option)
- Position sensing:
Al-profile rail for magnetic switches (option).
Magnetic switches available as reed switches or as electronic sensors (option).
- Various mounting arrangements

P1Z Series - Basic Version

Ø 16-40 mm

Installation tips for use with external guides

When stopping a load having a large inertia force at the stroke end, tilting of the carriage and damage to the bearings and cylinder barrel may occur (fig. left).

To prevent this, the force transmission should be realized at the middle axis of the cylinder.

The combination of the shock absorber with an end stop, can help to prevent the tilting of the carriage (fig. right).

Permissible moment M_x depending on the stroke length

Dynamic forces must not exceed the maximum magnetic coupling force!

Permissible axial load, vertical mounting

For vertical applications please refer to the values in the diagrams !

Note!

Select a theoretical force 50-100% larger than the force required

The Force Guide is only for double acting cylinders, please look into the technical catalogue for every individual single acting cylinder to see the forces.

Note! For all single acting cylinders you have to reduce the force in the table with the spring force to get the theoretical force.
The spring force is not calculated to create any work, it is only to take the piston rod into the cylinder.
